

When disaster strikes, HOPE is there.

Violent conflict. Deadly disease outbreaks. Record-breaking storms.

While their origins may vary, the result is the same: the health of millions of families is on the line.

We are up against a scale of suffering that cannot be ignored. As the world's crises compound, its poorest countries bear the cost: hospitals and clinics underequipped, communities underprepared, families unable to go without food, clean water, or medicine.

We're building a different world — a global community of health workers who have the skills they need to heal people. Hospitals and clinics that won't be shaken by disaster. Families that have access to incredible advancements in technology and medicine.

Project HOPE has responded to every major disaster since the 2004 Indian Ocean tsunami. Throughout our history, we've shown up on the front lines of the world's most urgent natural disasters and humanitarian crises: from Hurricane Dorian in the Bahamas, to Cyclone Idai in Mozambique, to the Venezuela crisis, to the COVID-19 pandemic.

We deploy staff and volunteers to provide critical medical support. We deliver lifesaving medicine and relief. And we stay long after the headlines fade to help health systems rebuild.
